Selection of Lubricant

Before operation, input N220~N320 (Ambient temperature -30°C~40°C) N320~N460 (Ambient temperature 25°C~65°C) lubrication oil up to the center line of the oil gauge. In the meanwhile, remove the small screw of the air-vent. After working for 100 hours in the first time, clear the inside and add new lubrication oil in it, then renew the lubricant oil per 2500 hours.

Lubricants for a reducer are optional in foreign as the below table.
